

These Thursday morning forecasts from:

Clear Sky Chart

Weather Channel

Weather Bug

Astropherics

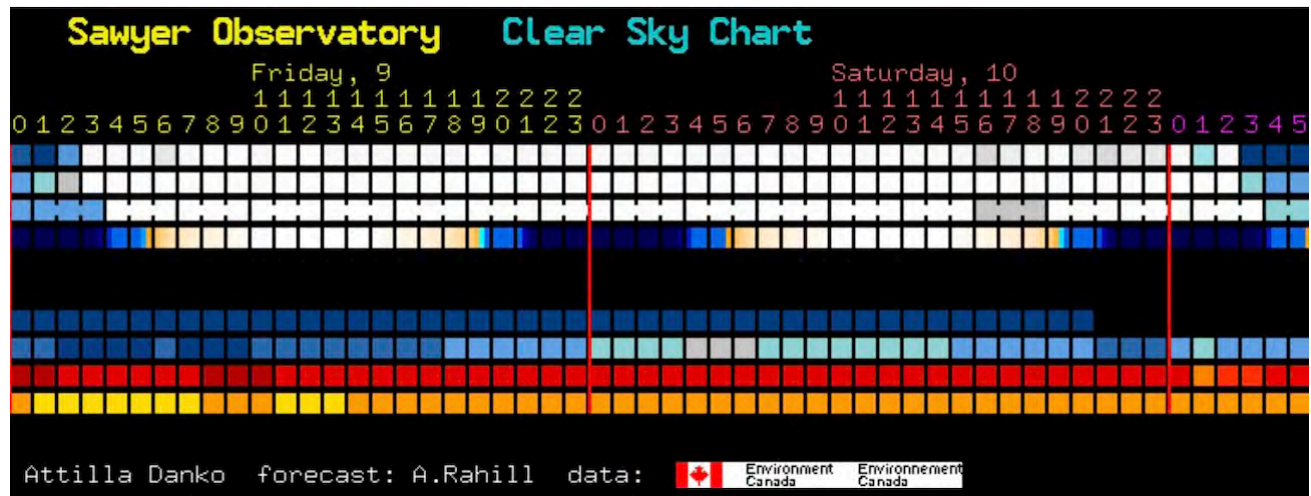

Accuweather

Astropherics with three composite NAM, RDSP & GFS Models (US & European models, I recall)

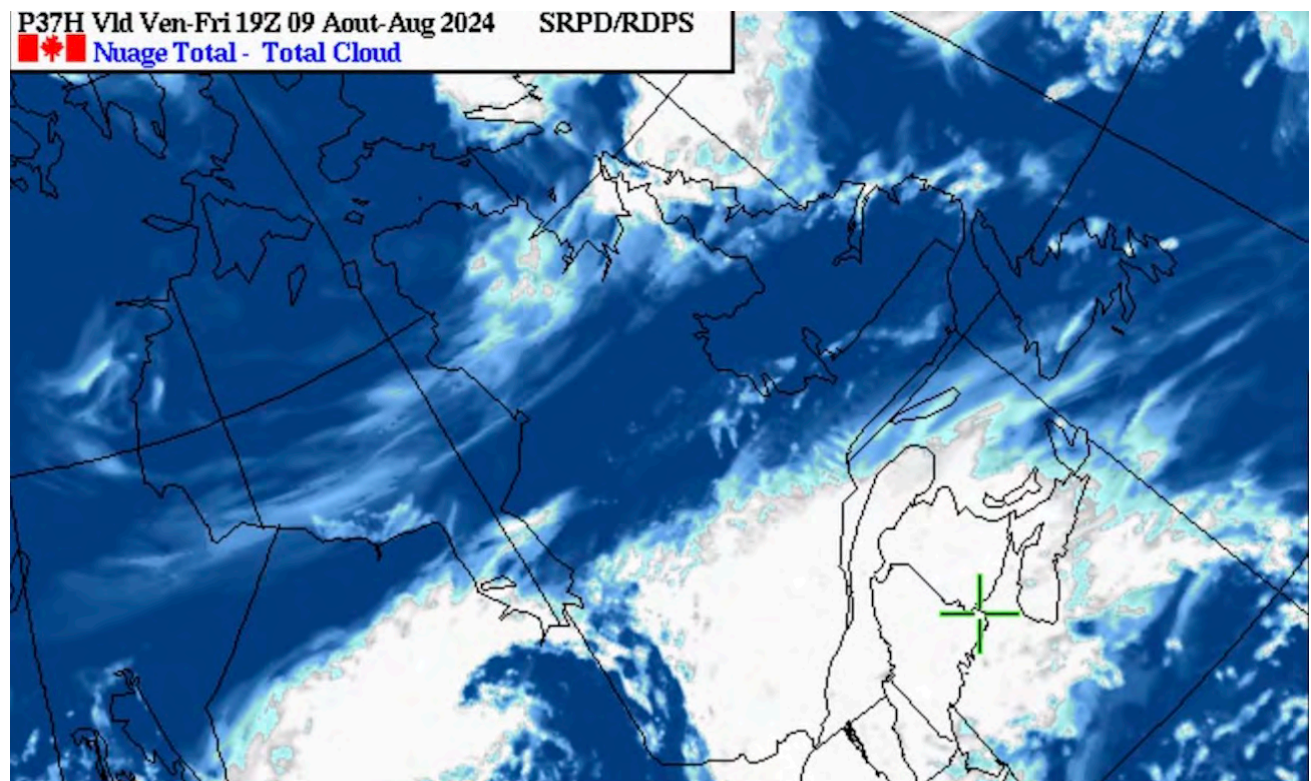

Basically they all say Friday Night overcast with chance of rain

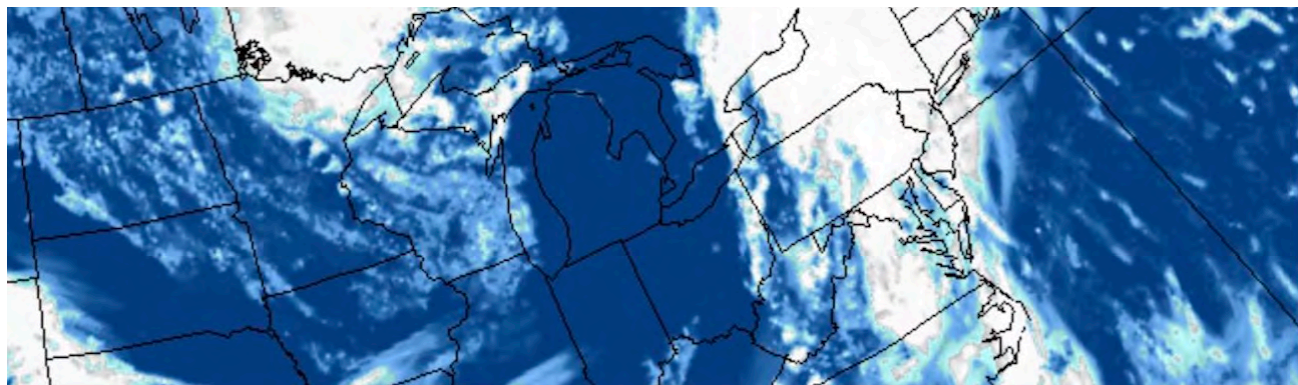

Saturday day overcast with high probability of rain & thunderstorms and windy

The forecast for Saturday evening deteriorated since last night. Only Accuweather shows hope of broken clouds but still with a 21% to 16% chance of rain until midnight.
